DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed 22 February 2005 amends claims 1, 11, 13, 20, and 29.

Applicant's amendment has been fully considered and is entered.

Response to Arguments

2. Applicant's arguments filed 22 February 2005 have been fully considered but they are not persuasive. Applicant's argument that the Lincke reference does not disclose using a registration message to transmit a public key is not persuasive because Lincke discloses that a message, with a public key, is sent to the mobile terminal to establish the public key for communication purposes (Col. 86, lines 44-56).

3. Applicant's argument that the Lincke reference does not disclose routing the information packet through an AAA server is not persuasive because Lincke discloses an encryption key is transmitted to the proxy server and recoverable via the private key of the proxy server (Col. 84, line 54 – Col. 85, line 18).

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002

Art Unit: 2132

do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 1-37 are rejected under 35 U.S.C. 102(e) as being anticipated by Lincke, U.S. Patent No. 6,253,326. Referring to claims 1, 8-11, 17-20, 26-29, 35-37, Lincke discloses a system for secure communications that includes a wireless communication device (mobile node), a base station, a proxy server, the Internet, and a web server (foreign network). The wireless communication device communicates with the base station via wireless communications to establish communications with the web server (foreign network)(Fig. 1), which meets the limitation of the establishing a security association with the mobile node and the foreign network. The base station is coupled to the proxy server via the private network (home network) and communicates to the web server (foreign network) through the Internet (Fig. 1), which meets the limitation of establishing a security association between the home network and the foreign network. The proxy server and the web server are all coupled to the Internet (Col. 8, lines 24-48). A message, with a public key, is sent to the mobile terminal to establish the public key for communication purposes (Col. 86, lines 44-56), which meets the limitation of using a registration message to transmit a public key. The wireless client generates a new 128-bit encryption key for secure transactions, and then encrypts the newly generated key with the public key of the proxy server. The encrypted key is then transmitted to the proxy server and recoverable via the private key of the proxy server (Col. 84, line 54 – Col. 85, line 18), this meets the limitations of encrypting, transmitting, and decoding encrypted information from the mobile node to the home

Art Unit: 2132

network. In the private network (home network) many servers, routers, and hubs may exist (Col. 9, lines 59-67), which meets the limitation of a home network having a home agent coupled to a router. It is understood that the web server would also contain many servers, routers and hubs (Col. 10, lines 56-67), which meets the limitation of a foreign network having a foreign agent coupled to a router.

Referring to claims 2-4, 12-14, 21-23, 30-32, Lincke discloses that the base station is couple to the proxy server via a private network (Col. 8, lines 24-48), the proxy server would meet the limitation of a correspondent node.

Referring to claims 5, 6, 15, 16, 24, 25, 33, 34, Lincke discloses the use of public/private key encryption algorithms (Col. 85, lines 12-13). Referring to claim 7, Lincke discloses that the network could be cellular (Col. 2, lines 46-54).
